

## **Junior Developer (m/f)**

Location: Vila Nova de Gaia

Founded in 2000, Celfocus is a joint venture of Vodafone Portugal, a fully owned subsidiary of Group Vodafone, and Novabase, the largest Portuguese information technology company listed on the Euronext Lisbon Stock Exchange.

Celfocus develops and implements technology solutions that help Communication Service Providers (CSPs) undergo Digital Transformation, by delivering a full fledged Telco Asset based on components that address CSPs' most complex, mission-critical issues.

We are recruiting talented junior engineers to join our development teams & support teams in Oporto. This is a unique moment to develop a career around emerging technologies such as Cloud computing, Big data, Digital Transformation or Internet of Things - at a time when software and equipment are increasingly connected and dependent of telecommunications.

Depending on your profile, skills, and motivation you will be able to start a career as a Developer (Java, EAI), Quality Assurance Engineer (Technical Tester, Functional Tester), Support Engineer or Junior Analyst.

We are looking for finalists or recent graduated candidates from Software Engineering or related fields who are passionate about information technologies or telecommunications. You must be available to work full time and have a good fluency in English.

At Celfocus we are committed to making your career a success, both in your current role and in what will make a great difference in shaping your future. We know that our success depends on the success of every person who works with us.

Applications must be sent by email to [ana.silva.cruz@celfocus.com](mailto:ana.silva.cruz@celfocus.com)
